AI-ENABLED LEARNING | WORKFLOW SAMPLE

From Expert Notes to a Course Draft

How I use AI to turn an expert's notes into a first draft that a person checks before it goes out.

AI drafts. A person decides. Each step says who does the work.

1 GATHER PERSON

Collect the expert's notes, the task people do on the job, and who the learners are. Take out anything confidential before it goes near an AI tool.

2 DRAFT AI

Run the reusable prompt below. It asks for objectives written from the task, a short outline, and scenario questions tied to the job, and it asks the AI to flag what it had to guess.

3 CHECK PERSON

Review the draft against the checklist. Anything the notes do not support comes out, and open questions go back to the expert.

4 BUILD PERSON AI

Build the course in Rise or Storyline. Use AI for rewrites and alternate versions, and check every change before it goes in.

5 IMPROVE PERSON

Test, survey, and review the item analysis. What I learn goes back into the prompt, so the next draft starts better. Review cycles and iterations are where the quality comes from.

THE PROMPT TEMPLATE

```
You are helping an instructional designer.
Learners: [role]
Task they do on the job: [task]
Expert notes: [paste, confidential details removed]

1. Write 3 objectives, each tied to the task.
2. Outline a 10-minute course in 5 parts.
3. Write 3 scenario questions, one per objective,
   with the answer and why the others are wrong.

Use plain language. List anything in the notes that
is unclear or that you had to assume.
```

THE PERSON-IN-THE-LOOP CHECKLIST

- [ ] Every fact traces to the expert's notes
- [ ] Nothing added that the notes do not support
- [ ] Each question maps to one objective
- [ ] Plain, inclusive, accessible language
- [ ] No confidential data in the prompt or the output
- [ ] The AI's "unclear or assumed" list is answered
- [ ] The expert signs off before launch

ONE EXAMPLE, AS IT LOOKS AFTER REVIEW

TASK
Spot a suspicious email and report it.

>

OBJECTIVE
Given a suspicious email, report it with the report button before clicking anything.

>

QUESTION
An email from "IT Support" asks you to confirm your password through a link. What do you do first?

Illustrative example on a neutral topic, a phishing awareness refresher. The workflow reflects how I use AI in design work.
